# About This Directory

The listings in this resource directory do not necessarily imply any endorsement by the Montana Department of Public Health and Human Services, the Communicable Disease Control and Prevention Bureau nor the STD/HIV Prevention Section.

For quick information & referral call the Montana STD/HIV InfoLine at 1-800-233-6668, 24 hours a day, from anywhere in Montana.

STD/HIV Prevention Section Staff includes: Sally Klein, Supervisor; Bruce Desonia, Linda Frahm, Theresa Gruby, Helen McCaffrey, Joe Merrifield, Claudia Montagne, Kathy Opie and Terry Peterson.

This directory was researched with the invaluable help of the HIV Prevention Sites , Community-based Organizations and staff input. Acknowledgment is also due to AmFar for their generous permission to use their invaluable lists to make our directory better. The directory was produced and edited by Linda Frahm.

The STD/HIV Prevention Section of the Communicable Disease and Prevention Bureau is pleased to provide this resource directory for your use. You will notice that the new name reflects the incorporation of information regarding sexually transmitted diseases (STDs).

This new 1997 STD/HIV Resource Directory has been redesigned to provide you with accurate referral resources and some basic information. It has been expanded to include a glossary, treatment trials and website addresses, in addition to the usual local and national resources. Our goal was to make this directory more user-friendly and easy to update for future editions.

You are an important part of the update process. If you find any errors or misinformation, please bring it to our attention. It is our intention to be as accurate as we can, but in this ever-changing world, we can only do our best. The information within is only as good as the people and places the information came from. To report any changes, please contact the STD/HIV Prevention Section at 406-444-3565.

# Suggestions

- \* Place tabs, paper clips or post it notes between sections to more easily find the different categories you use most often.
- \* Using colored highlighters to mark your most frequently used numbers will make your directory colorful and easier to use.
- \* When you find a mistake or if you discover something that needs to be updated, please call right away (444-2675) so the directory can be corrected.
- \* Use the back page to add your own resources, and consider sending them in so that we can share them with everyone.
- \* Feel free to copy any of the pages in this directory, there are no restrictions on duplicating this document.

## **HIV CONSORTIA AND EARLY INTERVENTION PROGRAMS (EIPs)**

Telling your client that he or she is HIV positive is a difficult task. The client will invariably feel a sense of hopelessness. We at the Montana Department of Public Health and Human Services (DPHHS), STD/HIV Program are charged with providing programs and services for the HIV positive individual to ensure continuity and coordination of care. PHHS works in collaboration with local city-county health departments, as well as community based organizations to provide the following services for HIV positive individuals.

- I. **AIDS Drug Reimbursement Program (ADRP)** - This program provides Zidovudine (AZT), didanosine (ddl), dideoxyctidine (ddC), stavudine (d4T), epivir (3TC), protease inhibitors and pentamidine to qualified individuals at no cost. As alternative drugs are approved, PHHS will investigate the costs and consider the inclusion of these drugs on the program (call for an update). For more information or an application, contact Joe Merrifield at the Montana HIV/STD Project, 444-4744.
- II. **Continuum of Health Insurance Coverage** - This program allows eligible individuals to continue their private health insurance by our paying all or part (up to \$200) of their monthly premiums. For more information or an application, contact Joe Merrifield at the Montana HIV/STD Project at 444-4744.
- III. **HIV Care Consortia** - The goal of the consortia is to plan, develop and deliver comprehensive outpatient health and support services to meet the identified needs of individuals and families with HIV disease within designated geographic areas. The five consortia in the state serve the governor's five planning regions. Contact the Montana HIV/STD Program at 444-3565 or the contact person for the consortium in your area.

Cascade City-County HD

contact: Ian White

- IV. **Early Intervention Program** - This program is intended to provide CD4 testing and a medical evaluation for HIV positive individuals as well as educational sessions with an early intervention counselor. The sessions cover a wide range of wellness oriented topics. The Early Intervention Program sites function in conjunction with the Counseling, Testing, Referral and Partner Notification (CTRPN) sites are as follows:

Cascade City-County HD  
1130 17th Avenue South  
Great Falls, MT 59405

For further information: Montana AIDS Hotline 1-800-233-6668.  
Department of Public Health and Human Services (PHHS),

Medicaid provides basic medical coverage for those with little or no resources or income .  
The program may also provide catastrophic coverage to those with some resources and  
income but whose medical expenses are excessive. To find out if you or your client may  
be eligible contact Human Services, or Medicaid Services Division  
at PHHS 444-4540.

## **INTERNET RESOURCES**

The internet resources listed below are for information and resource purposes only. Just because a site is listed does not necessarily mean that the Montana Dept of Public Health & Human Services endorses a particular treatment regimen, medication, health care provider, place of business, World Wide Web link, political or religious conviction or moral philosophy. The views expressed are solely those of the authors of the sites and not necessarily those of DPHHS. If you know of an interesting resource on the internet that you would like to see listed in this directory, please email [Ifrahm@mt.gov](mailto:Ifrahm@mt.gov) the pertinent information.

### **AIDS Action Council**

<http://www.thebody.com/aac/aacpage.html>

The AIDS Action Council is devoted solely to advocating at the federal level for more effective AIDS policy, legislation and funding, representing more than 1000 community-based AIDS service organizations throughout the U.S.

### **AIDS Clinical Trials Information Service**

<http://www.actis.org>

The AIDS Clinical Trials Information Service (ACTIS) provides current info on federally and privately sponsored clinical trials for persons with AIDS and HIV infection. ACFIS maintains two online databases: AIDSTRIALS and AIDSDRUGS.

### **AIDS National Interfaith Network**

<http://www.thebody.com/anin/aninpage.html>

Learn about the AIDS National Interfaith Network (ANIN); review an index of ANIN articles; access the National AIDS Ministry Database, which provides info on HIV and AIDS activities of more than 2000 religious organizations; receive ANIN action alerts; and learn how you can help to ensure that individuals with HIV and AIDS receive compassionate and non-judgemental support, care and assistance.

### **AIDS Treatment Data Network**

<http://www.aidsnyc.org/network>

Review a directory of clinical trials, fact sheets, treatment review reports, nutrition alerts, glossaries of drugs and opportunistic infections and conditions, alternative treatments, membership and links to other HIV/AIDS info on the web.

### **AIDS Treatment News**

<http://www.thebody.com/atn/atnpage.html>

### **AIDS Virtual Library**

<http://www.planetq.com/aidsvl>

**AmFAR Index of Articles**

<http://www.thebody.com/amfar/amfarix.html>

**American Social Health Assn. (ASHA)**

<http://sunsite.unc.edu/ASHA>

Visit the site of the organization which pioneered the use of telephone hotlines as a way to provide confidential and anonymous information about sexually transmitted diseases to individuals.

**The Body**

<http://www.thebody.com>

A multimedia AIDS and HIV information resource.

**Centers for Disease Control & Prevention (CDC)**

<http://www.cdc.gov>

**CDC National AIDS Clearinghouse**

<http://www.cdcnac.org>

**CDC National Center for HIV, STD & TB Prevention**

**CDC Prevention Guidelines Database**

<http://wonder.cdcc.gov/wonder/prevguid/prevuid.html>

**CDC Wonder**

<http://wonder.cdc.gov>

**Critical Path AIDS Project**

<http://www.critpath.org>

Treatment, resource and prevention info for PWAs, researchers, service providers, treatment activists and others.

**Dept. of Public Health & Human Services**

<http://www.dphhs.mt.gov>

**Gay Men's Health Crisis (GMHC)**

<http://www.gmhc.org>

Learn about GMHC; hotline, counseling and workshop information; the basics on AIDS, HIV testing and safer sex; caring for yourself and your friends; and useful facts and newsletters.

**Glossary of Internet Terms**

<http://www.matisse.net/files/glossary.html>

**The Good Health Web**

<http://www.social.com/health/index.html>

Valuable info about the field of health. Review a database of over 1000 health organizations in the U.S. and much more.

**Herpes Help Groups**

<http://sunsite.unc.edu/ASHA/phone/nsvgrps.html>

**HIV/AIDS Treatment Information Service (ATIS)**

<http://www.hivatis.org>

Provides info about federally approved treatment guidelines for HIV and AIDS.

**HIVNET Information Server**

<http://www.hivnet.org>

**Hotline Information**

<http://sunsite.unc.edu/ASHA/phone/phone.html>

**HPV Support Groups**

<http://sunsite.unc.edu/ASHA/phone/hpvgrps.html>

Nationwide listing of local support groups for people concerned about HPV (Human Papillomavirus).

**International Assn. of Physicians in AIDS Care**

<http://www.iapac.org>

Educational resource to introduce physicians, other health care professionals and people with HIV disease to some of the clinical and scientific info developed by IAPAC.

**Journal of the American Medical Assn. HIV/AIDS Info Center**

<http://www.ama-assn.org/special/hiv>

Easy to use interactive collection of useful and high quality resources for physicians, health professionals and the public. Links to clinical updates, news and info on a broad range of social and policy questions relating to HIV/AIDS are included.

**The NAMES Project - AIDS Quilt**

<http://www.aidsquilt.org>

Learn how to make an AIDS memorial panel and read about the NAMES project mission, history, who's involved and how you can become involved.

**National AIDS Treatment Advocacy Project**

<http://www.aidsnyc.org/natap>

Dedicated to facilitating the effort for development of effective treatment for HIV by advocating on treatment and policy issues for people with HIV and AIDS with drug companies, government officials and other treatment and policy advocates.

**National Assn of People with AIDS (NAPWA)**

<http://www.2.ari.net/medexpress/napwa.html>

Learn about NAPWA and how you can become involved.

**National Clearinghouse for Alcohol and Drug Info**

<http://www.health.org>

**National Institute of Allergy & Infectious Diseases - Nat. Institutes of Health**

<http://www.niaid.nih.gov>

Explore research on AIDS, TB and other diseases.

**National Institutes of Health**

**National Library of Medicine**

<http://www.nlm.nih.gov>

**National Minority AIDS Council - Index of Articles**

<http://www.thebody.com/nmac/nmacpage.html>

**Procaare Forum**

<http://www.healthnet.org/procaare.html>

Ongoing global AIDS forum. Professional medical conference and exchange of info on the spread of HIV/AIDS, treatments and prevention.

**Queer Resources Directory**

<http://www.qrd.org>

The QRD is an online gay/lesbian/bisexual info center that includes hundreds of newsletters and other files related to HIV treatment, epidemiology, prevention and advocacy.

**SIECUS Sex Information and Education Council of the U.S.**

<http://www.siecus.org>

**STDs - Health Devil Online**

<http://h-devil-www.mc.duke.edu/h-devil/stds/stds.htm>

Visit Duke University's popular site and learn about STDs the "healthy devil" way.

**STD Advocacy Issues**

<http://sunsite.unc.edu/ASHA/about/advocacy.html>

Learn about STD advocacy.

**The STD Homepage**

<http://med-www.bu.edu/people/sycamore/std/std.htm>

A popular site, with fact sheets on different STDs, including pictures and descriptions of STDs written in a language that non-medical people can understand; an STD quiz; risk info; a glossary and some interesting links to other sites.

**STD Research Group**

<http://www.jhustd.org/pub/jhustd>

Johns Hopkins University School of Medicine STD Research Group offers links to STD info, intended primarily for health care providers on prevention, diagnosis and treatment of the most common sexually transmitted diseases.

**UNAIDS**

<http://gpa.who.ch/unaids.htm>

The home page of the United Nations Global Program on HIV/AIDS.

**U.S. Dept of Health & Human Services**

<http://www.os.dhhs.gov>

**U.S. Food & Drug Administration**

<http://www.fda.gov>

**The White House**

<http://www.whitehouse.gov>

Visit the official site of the White House; email the President, Vice President and First Lady; conduct searches on all govt. websites via a White House database and use the Govt. Info. Locator Services to view records of all public govt. info.

## PHARMACEUTICAL DRUG ASSISTANCE PROGRAM

The following is a list of drugs commonly used in treating HIV infection, opportunistic infections or HIV-related disorders that are covered by the pharmaceutical company's indigent-patient program. Each company sets its own criteria for eligibility. Please call the number below the drug to determine your eligibility. This list is reproduced with permission of AmFar.

ACYLOVIR (zovirax)

Glaxo Wellcome Co

1-800-722-9294

ALPHA INTERFERON-2A

(Roferon-A)

Hoffman-LaRoche, Inc

1-800-443-6676

ALPHA INTERFERON-2B

(Intron-A)

Schering-Plough Corp

1-800-521-7157

AMITRPTYLINE

Roche Laboratories

1-800-285-4484

ATOVAQUONE (Mepron, 566)

Glaxo Wellcome Co.

1-800-722-9294

AZITHROMYCIN (Zithromax)

Pfizer, Inc

1-800-646-4455

AZT (Retrovir)

Glaxo Wellcome Co

1-800-722-9294

BLEOMYCIN (Blenoxane)

Bristol-Meyers Squibb

1-800-272-4878

CEFTAXIMINE (Claforan)

Hoechst-Roussel

1-800-422-4779

CEFTRIAXONE (Rocephin)

Roche Laboratories

1-800-285-4484

CEFUROXIME (Ceftin)

Eli Lilly & Co.

1-800-545-6962

CIMETIDINE (Tagamet)

SmithKline Beecham

1-800-546-0420

CIPROFLOXACIN (Cipro)

Miles Pharmaceuticals

1-800-998-9180

CLARITHROMYCIN (Biaxin)

Abbott Laboratories

1-800-688-9118

CLINDAMYCIN (Cleocine)

Upjohn Co

1-800-242-7014

CLOFAZIMINE (Lamprene)

Ciba Pharmaceuticals

1-800-257-3273

CLONAZEPAM (Klonopin)

Roche Laboratories

1-800-285-4484

CLOTRIMAZOLE (Mycelex, Lotrimin)

Miles Inc.

1-800-998-9180

Schering Laboratories

1-800-656-9485

CYCLOPHOSPHAMIDE (Cytoxan)

Bristol-Myers Squibb

1-800-272-4878

CYCLOSPORINE (Sandimmune)

Sandoz Pharmaceuticals

1-800-631-8184

DEXAMETHASONE (Decadron)

Merck & Co

1-800-994-2111

DRONABINOL (Marinol)

Roxane Laboratories

1-800-274-8651

ddC (Hivid) Hoffman-LaRoche Inc 1-800-285-4484	FLUOXETINE HYDROCHLORIDE (Prozac) Eli Lilly and Company 1-800-545-6962
ddl (Videx) Bristol-Meyers Squibb 1-800-272-4878	FOSCARNET (Foscavir) Astra Pharmaceutical Products Inc 1-800-488-3247
d4T (Stavudine) Bristol-Meyers Squibb 1-800-736-0003	GANCICLOVIR (Cytovene) Roche Laboratories 1-800-285-4484
DOXYCYCLINE (Vibramycin) Pfizer Inc 1-800-646-4455	GANCICLOVIR implant (Vitaserf) Chiron Vision 1-800-843-1137
EPO (Procrit) Ortho Biotech 1-800-553-3851	G-CSF (Leukine) Immunex Corporation (Physician calls only) 1-800-466-8639
ETHAMBUTOL (Myambutol) Wyeth-Ayerst 1-800-568-9938	GRANisetron (Kytril) SmithKline Beecham 1-800-866-6273
ERYTHROMYCIN Wyeth-Ayerst 1-800-568-9938	HYDROCORTISONE (Hydrocortone) (Cortef) Merck & Co 1-800-994-2111

## Some National Publications & Resources

<b>AEGIS Aids Education General Information System- CA</b>	<b>BBS 714-248-2836</b>
Free 24 hour AIDS information bulletin board system and on-line database. International conferences and full text articles from a number of newsletters and papers are available.	
<b>AIDS Action Bulletin. MD</b>	<b>410-837-2437</b>
Directory of clinical research in AIDS in Baltimore and Washington DC area.	
<b>AIDS Medicines in Development. DC</b>	<b>202-835-3400</b>
Annual chart of antivirals, immunomodulators and anti-infectives, diagnostics and vaccines. Free.	
<b>AIDS Policy &amp; Law. DC</b>	<b>800-333-1291</b>
Biweekly report on AIDS law and policy developments from the courts, NIH, Federal and State AIDS agencies, advocacy organizations and elsewhere.	
<b>AIDS Treatment Data Network Inc. NY</b>	<b>800-734-7104</b>
Provides HIV treatment and research information, educational resources and training to professional service providers and to the clients and communities they serve. Assists HIV+ persons with lower English or Spanish literacy levels. Email: AIDSTreatD@AOL.com	
<b>AIDS Treatment News. CA</b>	<b>800-873-2812</b>
Bimonthly reports on developments in treatments for HIV disease and related opportunistic infections. Covers issues relating to research and treatment access as well. Sliding scale. Email: aidsnewss@aidsnews.org	
<b>AIDS Update. TX</b>	<b>214-528-4233</b>
Newsletter includes general information on AIDS issues and treatments.	
<b>Body Positive. NY</b>	<b>212-566-7333</b>
Monthly magazine for people who are HIV+ or have AIDS. \$35 donation requested.	
<b>Canadian AIDS News. ON</b>	<b>613-725-3769</b>
Bimonthly newsletter focusing on AIDS education in Canada. Free.	
<b>Canadian HIV Trials Network. BC</b>	<b>604-631-5237</b>
Registry of Canadian HIV clinical trials.	
<b>The Common Factor. MA</b>	<b>617-344-9634</b>
Newsletter of the Committee of 10,000, an organization by, for and of the people infected with HIV through blood and blood products. Treatment articles, early intervention and resource list. Free to HIV+ people.	
<b>Critical Path AIDS Project. PA</b>	<b>212-545-2212</b>
Monthly publication with articles and reprints on experimental treatments and alternative therapies. Free to HIV+ people.	

<b>Directory of HIV Clinical Research in the Bay Area.</b> CA Free.	<b>415-476-9554</b>
<b>Directory of Philadelphia Area HIV/AIDS Clinical Trials.</b> PA	<b>215-985-4448</b>
<b>European AIDS Treatment News.</b> Germany European medical information, clinical trials and pre-clinical research.	<b>030-690-0870</b>
<b>FAACTS (Facts on Alternate AIDS Compounds and Treatments).</b> CA	<b>415-648-1357</b>
Summaries and reprints from the scientific and popular press concerning emerging treatments for HIV disease. Nominal fee.

<b>PI Prospective.</b> CA Quarterly newsletter of Project Inform.	<b>800-822-7422</b> hotline
<b>Positive Living.</b> CA Contains clinical trial, treatment and other AIDS/HIV-service information. Email: APLA1@aol.com	<b>213-876-2437</b>
<b>POZ magazine.</b> NY National magazine devoted to everyone affected by HIV/AIDS.	<b>800-883-2163</b>
<b>PWA Rag.</b> GA Prisoners with AIDS rights advocacy group newsletter. Articles, treatment updates and resources for prisoners.	<b>770-946-9346</b>

<b>Seasons. CA</b>	<b>510-444-2051</b>
Quarterly newsletter of the Native American AIDS Prevention Center, features articles and artwork by Native Americans impacted by HIV/AIDS. Free subscriptions in U.S.	
<b>STEP Perspective. WA</b>	<b>800-869-7837</b>
The Seattle Treatment Exchange Project provides updates on treatments for HIV and OIs, also publishes fact sheets/position papers. Email: step@eskimo.com	
<b>TAGline.NY</b>	<b>212-260-0300</b>
Monthly paper of research and policy from the Treatment Action Group.	
<b>Treatment Issues. NY</b>	<b>212-807-6655</b>
Newsletter of experimental AIDS therapies and treatments for opportunistic infections by the Gay Men's Health Crisis. Email: Dave_G@gmhc.org	
<b><u>OF PARTICULAR INTEREST TO WOMEN</u></b>	
<b>National Women &amp; HIV/AIDS Project. DC</b>	<b>202-547-1155</b>
Grass roots organization serving a diverse group of women living with HIV/AIDS. Email: WOMENAIDS@aol.com	
<b>LAPNOTES. NY</b>	<b>212-337-3532</b>
Quarterly newsletter of the Lesbian AIDS Project. Free.	
<b>WISE WORDS.GA</b>	<b>404-817-3441</b>
Monthly publication providing treatent advocacy, access and information for wormen living with HIV/AIDS.	
<b>World. CA</b>	<b>415-658-6930</b>
Monthly newsletter on women & HIV/AIDS. Available in English or Spanish ( <i>Mujer Imagen de Vida</i> ). Sliding scale subscriptions.	
<b><u>BUYER'S CLUBS</u></b>	
These organizations assist members with HIV infection to obtain a variety of medicines for their personal use.	
AIDS Manasota. Sarasota, FL.	813-954-6011

## **Para Mayor Información en Español**

**Centro para el Control de Enfermedades y Prevención (CDC) ofrece información general para hispano parlantes. 1- 800-334-7432**

**El CDC también tiene varios datos y publicaciones, escrito en español, que tratan del SIDA y el VIH. Para conseguirlas, llame al Centro de Recursos Nacional del CDC, teléfono 1-800-458-5231. Se hablan Español y Inglés.**

**Para información acerca de las pruebas clínicas coordinadas por los Institutos Nacionales de Salud (NIH) y datos sobre las pruebas de eficacia aprobadas por la Administración de Alimentos y Drogas (FDA), marque 1-800-874-2572. Se Hablan Español y Inglés.**

**SIDA América. Información sobre el SIDA en las Américas. Póngase en contacto con *The Panos Institute* en Washington DC. Teléfono 1-202-483-0044.**

### **Publicaciones**

**BETA, Boletín de Tratamientos Experimentales para el SIDA.** 800-959-1059  
Llame gratis para información sobre suscripciones. California

**Boletín LATINO.** 206-322-7061  
Es una publicación trimestral de Latinos Unidos Contra El SIDA del Estado de Washington en Inglés y en Español.

**El Cuerpo Positivo.** 212-721-1346  
Una revista publicada cuatro veces al año por *Body Positive* para personas VIH infectadas y afectadas. La revista es completamente en Español. Pregunte por Carmen Navarro. Localizada en Nueva York.

**Inventario de Recursos de Investigación en SIDA.** 202-861-3200  
Publicado y realizado por la Organización Mundial de la Salud. Este inventario es un instrumento básico para facilitar el conocimiento sobre SIDA/VIH en los diferentes países de la Región. La finalidad que se persigue es detectar vacíos en la investigación y fomentar el desarrollo de proyectos que apoyen a los programas de prevención, control, diagnóstico y tratamiento de SIDA en nuestros países. En *Washington DC*.

**(In)visible Woman.** 312-899-5172  
Un video sobre latinas con SIDA que desafían el miedo que el público tiene sobre el SIDA. \$59.95 (US\$). Se estrenó en 1991. Documental de 26 minutos. En Español o Inglés. En *Chicago, Illinois*.

**Libro Sobre Derechos de PCS.** *AIDS Legal Rights Handbook*. Póngase en contacto con NGRA, 540 Castro St., San Francisco, CA 94114.

**Mujer Imagen de Vida.**

**415-658-6930**

Una revista publicada cada tres meses por y para las mujeres con VIH. Es una publicación hermana de *WORLD*, en Oakland, California. Es gratis, pero se aceptan donaciones.

**PACTO Latino.**

**617-294-6622**

Un boletín en Inglés y Español de PACTO, un programa para latinos afectados con el VIH/SIDA. El periódico se publica cuatro veces al año. Póngase en contacto con PACTO en San Diego, California.

**Qué es un Virus?**

**800-621-6969**

Un libro para niños que explica el VIH y SIDA. Traducido del Inglés. Ordénalo de *Lambda Rising Bookstore* en Washington, DC.

**SIDAahora.**

**212-647-1419**

**El propósito de SIDAahora es el de presentar a la comunidad hispana viviendo con VIH y/o SIDA, información sobre tratamientos, complicaciones y otros temas relacionados con el SIDA. SIDAahora acepta contribuciones de artículos, dibujos, fotografías y otros trabajos escritos y gráficos para ser pulicados en la revista.** Los mismos deben ser enviados a: SIDAahora- PWAC/NY, 50 West 17th St, 8th Floor, New York, NY 10011.

# **Most Frequently Asked Questions About HIV.**

## **HIV/AIDS**

### **What is HIV?**

HIV stands for Human Immunodeficiency Virus, the virus that causes your immune system to slowly break down until it can no longer fight off infections or diseases.

### **What is AIDS?**

AIDS stands for Acquired Immunodeficiency Syndrome, the end stage of HIV disease. Once a person's immune system has become so damaged that the person can no longer fight off infections and diseases, those illnesses can lead to severe symptoms, and eventually, death.

### **If my HIV test is negative, that means I'm safe, right?**

Not necessarily. HIV tests usually look for a person's antibodies to HIV. It takes the body a while (3 weeks to 6 months) to build up enough antibodies for the test to find them. So, if you have a test today, it really only tells you your HIV status as of a few months ago. If you get a negative test today, but have put yourself at risk in the 3-6 months prior to the test, you could still be infected, but the test wouldn't be able to tell right away. This is called the "window period," the time between becoming infected and testing positive, one of the biggest reasons HIV is so dangerous. That's why it is smart to have a second test about 3 months after the first. By the way, if you are infected and have tested negative because you are in the window period, you can infect others. So now you know that if someone shows you a negative HIV test, hoping to get close to you, it really may not mean that person is free of HIV.

### **I am HIV+ and I'm pregnant, is my baby going to be okay?**

Your baby now has a much lower risk of becoming HIV infected, about 8-12%, if you use AZT while you are pregnant. Ask your health care provider about it. Otherwise, without treatment the chances rise to about 30%.

### **Can I get AIDS from a mosquito bite?**

No. Insect bites pose no known HIV/AIDS risk.

### **If a co-worker has AIDS, am I at risk at work?**

No. HIV/AIDS can not be passed on through the routine casual contacts that are typical between co-workers. There is no reason to change your relationship with an HIV infected co-worker. Of course you would want to use universal precautions if the person is involved in an incident that leads to bleeding. You want to protect yourself from blood contact by wearing rubber gloves if you get involved in helping that person with first aid.

### **Why are tests anonymous? Don't I have a right to know if someone has HIV/AIDS?**

No one has a "right" to know about someone's HIV status. An HIV infected person may choose to tell his/her doctor or dentist, but the reality is, people who are infected pose little risk to people with whom they have casual contact, and in the case of health care providers, universal

precautions protect them from exposure to HIV. If an HIV+ person wants you to know their status, they will share it with you.

### **What are universal precautions?**

Universal precautions refers to the protocol that prevents the spread of infection and to keep health workers safe when coming in contact with blood and other bodily fluids and needles, etc. To protect themselves and others they must use protective barriers such as rubber gloves, gowns, masks and goggles. In addition they must use safe work practices such as proper disposal of sharps (needles, sharp instruments, broken glass), proper handwashing and covering any broken skin.

It is also a very good practice for non-health workers to know how to protect themselves if they ever come across an accident or other disaster and need to help, so they can be safe. It is always a great idea to keep a pair of rubber gloves and a CPR mouth barrier in your glove compartment for just that reason.

### **I think I may need an HIV test. Where do I go to get it?**

If you think you need a test, there are a number of options available to you. Your local health department or family planning clinic can either do the test or direct you to a place that can. You can buy a home test kit from any pharmacy, although these tests are typically \$30-\$50 and you don't get the personal attention that you do in a clinic, where a test can be free. You can also get one from your health care provider although the results will only be confidential and not anonymous.

If you need the number of your local test site, call the Montana STD/HIV InfoLine at 1-800-233-6668 or the National AIDS Hotline at 1-800-342-AIDS (2437).

### **What's the difference between anonymous and confidential testing?**

Anonymous testing means you can go into a clinic and use a code to identify yourself and no one knows who you are. You get your results based upon the code.

Confidential testing means the tester knows who you are, but doesn't share your results with anyone (except your insurance company) except you, unless you specify someone. This can be sometimes problematic because insurance companies have been known to cancel policies in the past based upon this type of information. It is unlawful to discriminate in this way, but it is done, usually under the guise of some other reason. The up side is that you can discuss your concerns with a health care provider with whom you have a history and trust.

It is important to know that if you have a positive test for HIV, statistical (non-identifying) information about you is shared with the state health department and the CDC. If you have full blown AIDS, you are reported by name to those entities (who keep the identifying info confidential).

### **What should I expect when I go for an HIV test?**

You should expect to be treated with respect and concern by your pre and post test counselor. If you are testing anonymously, the counselor will not try to identify you. He/she will go over your risk-related history and help you decide if you really have put yourself at risk and need a test. The counselor will set up a time for you to come back for your results. The counselor will also be sure that you understand what the risk behaviors are for HIV and that you have a

plan to reduce your risk in the future. The counselor is someone you can trust and count on.

The most common HIV test is done by taking a blood sample from your arm. The blood is sent to the state lab, which will have results for you in a week to 10 days. You go to the testing place and get your results from your counselor, who can provide emotional support and referrals if necessary for your future use. You can typically see that counselor for a while for follow up if you desire. HIV testing is a learning opportunity and a chance to reduce your fears.

There is also an oral fluids test which is becoming more widely used; ask your clinic if that option is available when you call to make your appointment.

### **How do people get infected with HIV?**

HIV lives in semen, blood, vaginal fluids and breast milk in a person with HIV. The virus can be passed from one person to another through any of these infected fluids. HIV can be passed during vaginal, oral or anal sex with someone who has HIV. Sharing needles and other equipment to inject drugs is another way people get HIV. HIV can also be passed by needles used for tattoos and piercing, or to inject vitamins, insulin or steroids.

Although it is rare, health care workers caring for people with HIV can get HIV from a needle stick injury. HIV can also be passed from an HIV+ mother to her baby during pregnancy, birth or breastfeeding. Before 1985, some people got HIV from infected blood transfusions. The chances of becoming infected through a transfusion is now extremely small (2 in a million).

You cannot get HIV from casual contact, kissing (deep kissing may pose a risk due to small cuts or gum disease in your mouth), hugging, sharing food, telephones, toilet seats, towels or eating utensils. Tears, saliva, sweat and urine contain very small amounts of HIV, but not in sufficient quantity to infect you. You can not get HIV from donating blood.

### **How can I protect myself from getting HIV?**

The only ways to be 100% safe from HIV infection are to not have sex and not use IV drugs. If you are in a long term monogamous relationship with someone who is not infected, then you are probably safe also as long as you only have sex with that one trusted partner.

However, if you want to be sexually active, use safer sex techniques. This includes using a new latex condom consistently and correctly every time you have sexual contact (vaginal, anal or oral). Condoms with Nonoxylnol 9 give added protection. Call your local health dept for tips on using condoms correctly.

If you use injection drugs, don't share your equipment with anyone and don't use any equipment anyone else has used first. Use only new equipment, or clean your equipment with bleach by flushing the syringe 3 times with bleach and then 3 times with water. IV drug use is a very risky behavior; consider getting help to get off drugs.

### **Where can I get more information?**

The Montana STD/HIV InfoLine is there for you with volunteers, a health educator and some pre-recorded messages about STDs, including HIV/AIDS. Call 1-800-233-6668 anytime. You can also talk to the helpful people at your local family planning clinic or, health department, or to your school nurse. There is no reason not to have the facts, and by having those facts, you can protect yourself from HIV.

Respect yourself--Protect yourself!

# GLOSSARY

**ABSOLUTE CD4+ CELL COUNT (T4 Count):** The number of T helper cells (lymphocytes) in a cubic millimeter of blood. Normal range for adults is 800-1200. The CD4+ cell count is significantly lower in people whose immune system has been affected by HIV.

**ACQUIRED IMMUNE DEFICIENCY SYNDROME (AIDS):** The late manifestations of infection with the human immunodeficiency virus (HIV). The Centers for Disease Control and Prevention lists numerous opportunistic infections and neoplasms which, in the presence of HIV infection, constitute an AIDS diagnosis. In addition, a CD4 count below 200/mm<sup>3</sup> (when the risk of OIs markedly increases) in the presence of HIV infection, constitutes an AIDS diagnosis.

**ACROMEGALY:** A chronic disease caused by excessive secretion of growth hormone from the pituitary gland. It is characterized by enlargement of many parts of the skeleton, especially the nose, ears, fingers and toes.

**ACTG:** See AIDS Clinical Trials Group

**ACTIVE IMMUNITY:** Immunity produced by the body in response to stimulation by a disease-causing organism or other antigen, as in a vaccine.

**ADENOPATHY:** Enlargement of glands, especially the lymph nodes.

**ADJUTANT:** Any substance that enhances the immune stimulating properties of an antigen or the pharmacologic effect of a drug.

**ADMINISTRATION (route of administration):** How a drug or therapy is introduced into the body (e.g., intravenously, or orally).

**ADVERSE REACTION:** Any undesirable effect of a medication.

**ADVERSE EXPERIENCE (A.E.):** Any undesirable event that occurs while under treatment, whether due to medication, disease, or other reasons.

**AEROSOLIZED:** A form of administration in which a drug, such as pentamidine, is turned into a fine spray or mist by a nebulizer, and inhaled

**AFEVRILE:** Without a fever.

**AGAMMAGLOBULINEMIA:** A total or near total absence of immunoglobulins, or antibodies, in the blood.

**AIDS CLINICAL TRIALS GROUP (ACTG):** A network of medical centers, supported by the National Institute of Allergy and Infectious Disease, that conducts multi-center trials of treatments for AIDS/HIV and opportunistic infections.

**AIDS DEMENTIA COMPLEX (ADC):** A degenerative neurological condition, generally attributed to HIV disease, with a wide variety of clinical presentations including loss of coordination, mood swings and loss of inhibitions, and widespread cognitive deficit.

**ALKALINE PHOSPHATASE:** An enzyme measurement that indicates the health of the liver.

**ALOPECIA:** Hair loss

**ALBUM:** An odorless, colorless, crystalline substance used as a topical application.

**ALVEOLAR:** Pertaining to the alveoli sac, the site of gas exchange in the lungs.

**AMEBIASIS:** Infection with amebas, especially *Entameba histolytica*.

**AMINO ACID:** Any one of 20 or more organic acids that are the building blocks of proteins, necessary for metabolism and growth.

**AMNIOCENTESIS:** A procedure in which a hollow needle is inserted into the uterus of a pregnant female to obtain amniotic fluid.

**AMYLASE:** A digestive enzyme secreted by the pancreas into the small intestine and by the parotid gland (into the saliva). High levels in the blood may indicate pancreatic damage.

**ANABOLIC STEROIDS:** Muscle or weight-building steroids.

**ANALOG (ANALOGUE):** A chemical compound with a structure similar to that of another but differing from it in respect to a certain component; it may have a similar or different action metabolically.

**ANAMNESTIC RESPONSE:** The heightened immunologic reaction elicited by a second or subsequent exposure to a particular pathogenic microorganism or antigen.

**ANAPHYLACTIC SHOCK:** A life-threatening allergic reaction characterized by a swelling of body tissues (including the throat) and a sudden decline in blood pressure.

**ANEMIA:** When blood is deficient in red blood cells or hemoglobin.

**ANERGIC:** The state of being so immunologically suppressed that one is unable to produce cutaneous delayed type hypersensitivity reaction (DTH) to antigenic skin tests. Such persons will usually not test positive for TB on a PPD test even if they have been infected.

**ANGIOMATOSIS:** A condition characterized by the formation of a tumor that is composed chiefly of blood or lymphatic vessels.

**ANOREXIA:** Lack or complete loss of appetite for food.

**ANTI-IDIOTYPE:** An antibody that recognizes and binds to another antibody (idiotype).

**ANTI-NEOPLASTIC:** Inhibiting or preventing the proliferation of tumor (cancer) cells.

**ANTIBIOTIC:** A chemical substance that kills bacteria or inhibits its growth; antibiotics are used to treat infectious diseases.

**ANTIBODIES:** Molecules in the blood or bodily secretions that tag, destroy or neutralize bacteria, viruses, or other harmful toxins. They are members of a class of proteins known as immunoglobulins, which are produced and secreted by B-lymphocytes in response to stimulation by antigens.

**ANTIBODY-DEPENDENT CELL-MEDIATED CYTOTOXICITY (ADCC):** An immune response in which antibodies bind to target cells, identifying them for attack by the immune system.

**ANTIEMETIC:** An agent that prevents vomiting.

**ANTIFOLATE:** An agent that inhibits intracellular production of folic acid.

# GLOSSARY

**ANTIGEN:** A substance that, when introduced into the body, is capable of inducing the production of a specific antibody.

**ANTIGENEMIA:** The presence of antigen in the blood.

**ANTIOXIDANT:** A substance that inhibits oxidation or reactions promoted by oxygen or peroxides. Antioxidant nutrients are thought to protect human cells from damage. Nutrients that act as antioxidants include vitamins C and E, beta-carotene, and selenium.

**ANTIRETROVIRAL:** A substance, drug, or process that destroys a retrovirus or inhibits its replication. Often used to describe a drug active against HIV.

**ANTITOXINS:** Antibodies that recognize and inactivate toxins produced by certain bacteria, plants, or animals.

**ANTIVIRAL:** A substance or process that destroys a virus or suppresses its replication.

**AIDS (AIDS Related Complex):** An outdated term to describe patients with some HIV-related symptoms but no AIDS-defining diagnoses. These may include recurrent fevers, unexplained weight loss, swollen lymph nodes, and/or fungus infection of the mouth and throat. Also commonly described as symptomatic HIV infection.

**ARRHYTHMIA:** Abnormal heart rhythm.

**ARTHRALGIA:** A pain in a joint.

**ASPERGILLOSIS:** A fungal infection resulting from aspergillus; it is also known as aspergillosis.

**ASYMPTOMATIC:** Without symptoms.

**ATTENUATED VIRUSES:** A weakened virus with reduced ability to infect or produce disease. Some vaccines are based on attenuated viruses.

**AUTOANTIBODY:** An antibody directed against the body's own tissue.

**AUTOMUNIZATION:** The induction in an individual of an immune response to its own cells (tissue).

**AUTOLOGOUS:** Pertaining to the same organism or one of its parts; originating within an organism itself.

**AZOLES:** A class of antifungal drugs (miconazole, itraconazole, ketoconazole, etc.) that are used to treat fungal infections, including candidiasis, cryptococcosis, histoplasmosis, etc.

**AZOTEMIA:** an excess of urea or other nitrogen-containing compounds in the blood.

**B CELL LYMPHOMA:** A malignancy of the B lymphocytes

**B-LYMPHOCYTES (B-cells):** One of two major classes of lymphocytes. During infections, these cells are transformed into plasma cells that produce large quantities of antibody directed at a specific pathogen. This transformation occurs through interactions with various types of T cells and other components of the immune system.

**B CELLS:** See B-Lymphocytes.

**BACTERICIDAL:** Capable of killing bacteria.

**BACTEROSTATIC:** Capable of inhibiting reproduction of bacteria.

**BACTERIUM:** A microscopic organism composed of a single cell. Many bacteria can cause disease in humans.

**BASELINE CHARACTERISTICS:** A variable that is measured, observed or assessed in a patient at the beginning of a trial, prior to the initiation of treatment.

**BASOPHIL:** A type of white blood cell, also called a granular leukocyte, filled with granules of toxic chemicals, that can digest microorganisms. Basophils are responsible for the symptoms of allergy.

**BCG VACCINE (bacille Calmette-Guerin vaccine):** A tuberculosis vaccine made from an attenuated live strain of *M. bovis*. It is contra-indicated in HIV-infected people.

**bDNA (BRANCHED DNA ASSAY):** A test using for measuring the number of HIV fragments in the blood of people with HIV. The test quantifies HIV-RNA using a methodology that differs from polymerase chain reaction (PCR).

**BILIRUBIN:** A bile pigment measurement that indicates the health of the liver.

**BIOAVAILABILITY:** The rate and extent to which a substance is absorbed and circulated in the body.

**BIOLOGICAL RESPONSE MODIFIERS (BRMs):**

Substances, either natural or synthesized, that boost, direct, or restore normal immune defenses. BRMs include interferons, interleukins, thymic hormones and monoclonal antibodies.

**BIOPSY:** Removal and laboratory examination of tissue from the living body.

**BIOSYNTHESIS:** The building up of a chemical compound in the physiologic processes of a living organism.

**BIOTECHNOLOGY:** The use of living organisms or their products to make or modify a substance. These include recombinant DNA techniques (genetic engineering) and hybridoma technology to create monoclonal antibodies used as therapies.

**BREAKTHROUGH:** See "TREATMENT FAILURE."

**BRONCHI:** The hollow branches in the lungs that connect the trachea to the alveoli.

**BRONCHOSCOPY:** Visualization of the trachea and lungs with flexible fiber optics.

**CACHEXIA:** General weight loss and wasting

**CANDIDA:** A yeast-like fungus, commonly found in the normal flora of the mouth, skin, intestinal tract and vagina. In immune-compromised people it can cause infections including thrush and esophageal disease.

**CANDIDIASIS:** An infection with a fungus of the *Candida* family, generally *C. albicans*.

**CARCINOGEN:** Any cancer-producing substance.

**CARDIOMYOPATHY:** A degenerative condition of the heart muscle, cardiomyopathy may be caused by HIV, other viruses, or by some drugs.

# GLOSSARY

**CASE-CONTROL STUDY:** A study that involves the identification of persons with the disease or condition of interest (cases) and an otherwise comparable group of persons without the disease or condition of interest (controls). Cases and controls are then compared to some current or past attribute or exposure that may be causally related to the disease or condition.

**CATHETER:** A tube used to inject or drain fluids from the body. A semi-permanent installed venous catheter may be placed to deliver intravenous medications or nutrients on a chronic basis.

**CD4:** (T4) A protein embedded in the cell surface of helper T-lymphocytes; also found to a lesser degree on the surface of monocyte/macrophage, Langerhans cells, astrocytes, keratinocytes, and glial cells. HIV invades cells by first attaching to the CD4 molecule (CD4 receptor).

**CD8:** (T8) A protein embedded in the cell surface of suppressor and killer T-lymphocytes.

**CELL-MEDIATED IMMUNITY(CMI):** See cellular immunity.

**CELL LINES:** Specific cell types artificially maintained in the laboratory for scientific purposes.

**CELLULAR IMMUNITY:** The branch of the immune system that relies primarily upon specific defense cells rather than antibodies. See also: humoral immunity.

**CENTRAL NERVOUS SYSTEM:** Composed of the brain, spinal cord, and their coverings (meninges).

**CEREBRAL:** Pertaining to the cerebrum, which is the main portion of the brain.

**CERVICAL DYSPLASIA:** The development of abnormal tissue on the cervix, the outlet of the uterus; may progress to cancer.

**CERVIX:** The cylindrical, lower part of the uterus leading to the vagina

**CHELATE:** A chemical that reacts with metallic ions, used to treat metal poisoning.

**CHEMOPROPHYLAXIS:** Prevention of disease by chemical method.

**CHEMOTHERAPY:** The treatment of disease by chemical agents; usually refers to cancer treatment.

**CHRONIC:** Referring to a process, such as a disease process, that persists over a long period of time, in contrast to acute.

**CHIP:** Chronic idiopathic demyelinating polyneuropathy.

**CIRCULATING IMMUNE COMPLEXES (CIC):** See Immune Complex.

**CLINICAL TRIAL:** A study, in people that evaluates medications or medical procedures.

**CLINICAL:** Pertaining to or founded on actual observation and treatment of patients, as distinguished from theoretical or basic science.

**CLONE:** A group of genetically identical cells or organisms descended from a common ancestor.

**CLOSTRIDIUM DIFFICILE (C. DIFFICILE):** A nominal gastrointestinal tract bacteria that is resistant to many antibiotics. Antibiotics can cause overgrowth of *C. difficile*, which may lead to serious abdominal infection and bleeding.

**CNS (Central Nervous System):** Composed of the brain, spinal cord, and their coverings (meninges).

**CO-FACTORS:** Substances, microorganisms, or characteristics of individuals that may influence the progression of a disease or the likelihood of becoming ill.

**COCCIDIODIMYCOSIS:** A fungal disease that results from infection with Coccidioides immitis.

**CODON:** A sequence of three nucleotides of messenger RNA that specifies addition of a particular amino acid to, or termination of, a polypeptide chain during protein synthesis.

**COHORT:** In epidemiology, a group of individuals with some characteristic in common.

**COLITIS:** Inflammation of the colon.

**COLON:** A division of the intestine where solid waste is compacted into feces, extending from the cecum to the rectum; also called the large intestine.

**COLONIZATION:** Residence of bacteria in, or on, part of the body and causing neither disease nor a response by the individual's immune system.

**COLORECTAL:** Relating to the colon and rectum, or to the entire large bowel (large intestine).

**COLPOSCOPY:** A type of examination of a living tissue surface, under magnification, to identify location and extent of lesions.

**COMMUNITY-BASED CLINICAL TRIAL (CBCT):** A clinical trial conducted primarily by primary-care physicians, rather than in academic research facilities.

**COMPASSIONATE USE:** A method of providing experimental drugs to very sick patients who have no other treatment options. Often, case-by-case approval must be obtained from the FDA for "compassionate use" of a drug.

**COMPLEMENT:** A group of proteins in normal blood serum and plasma that, in combination with antibodies, causes the destruction of antigens (particularly bacteria and foreign blood corpuscles).

**COMPLEMENT CASCADE:** A precise sequence of events, usually triggered by an antigen-antibody complex, in which each component of the complement system is activated in turn.

**COMPUTED TOMOGRAPHY (CAT/CT SCAN):** A computer-aided imaging that assembles multiple X-rays of "slices" of the body to produce a three dimensional picture.

**CONCOMITANT DRUGS:** Drugs that are taken together. Certain concomitant medications may have adverse interactions.

**CONFIDENCE INTERVAL:** A range in which there is a specified degree of assurance that the value of a given parameter can be found.

**CONTAGIOUS:** Any infectious disease capable of being transmitted by casual contact from one person to another.

**CONTRAINDICATION ("to indicate against"):** A specific circumstance when the use of certain treatments could be harmful.

**CONTROLLED:** 1. Constrained, monitored, or watched. 2. A system of observation and data collection that provides a basis for comparison, as with a comparison group.

# GLOSSARY

**CORE PROTEIN:** An integral component of HIV composed of three sub-units: p24, p15, and p18.

**CORTICOSTEROIDS:** Any of a number of steroid substances obtained from the cortex of the adrenal gland or manufactured synthetically.

**CREATININE:** A protein found in muscles and blood and excreted by the kidneys in the urine. The level of creatinine in the blood and urine provides a measure of kidney function

**CROSSOVER:** When a study participant changes from one assigned treatment to another assigned treatment.

**CRYPTOCOCCOSIS:** A fungal disease that results from infection with the fungus Cryptococcus neoformans, which is acquired via the respiratory track

**CRYPTOCOCCUS NEOFORMANS:** A fungus, pathogenic in the immune-suppressed, which is acquired via the respiratory tract. Cryptococcosis most frequently causes meningitis, with symptoms of headache and stiff neck.

**CRYPTOSPORIDIOSIS:** An opportunistic infection of the intestines caused by a protozoan parasite (Cryptosporidium parvum).

**CT:** Computed Tomography (CAT Scan)

**CULTURE:** The process of growing bacteria or other microorganisms in the laboratory, often for use in diagnostic studies

**CUTANEOUS:** Of, pertaining to or affecting the skin

**CYLINDRURIA:** The presence of tube casts in the urine

**CYTOKINES:** Soluble, hormone-like substances produced and secreted by lymphocytes and monocytes/macrophages, which act as inter-cellular messengers

**CYTOMEGALOVIRUS (CMV):** A herpes virus that is a common cause of opportunistic diseases in people with AIDS and other people with immune suppression. While CMV can infect most organs of the body, people with AIDS are most susceptible to CMV retinitis and colitis.

**CYTOPENIA:** Decrease in the cellular elements of the blood resulting in suppression of function or cell death

**DYSMENORRHEA:** Difficult and painful menstruation.  
**DYSPLASIA:** The abnormal development of tissue. In disease, the alteration of size, shape and organization of adult cells.

**DYSPNEA:** Difficult or labored breathing

**ECHOCARDIOGRAPHY:** The use of ultrasound in the investigation of the heart and great vessels for diagnosis of cardiovascular lesions.

**ED50:** Short for "Effective dose 50," the dosage of a drug or poison that kills, or stops replication, in 50 percent of the organisms it is tested against in a culture.

**EDEMA:** Swelling due to increased extracellular water.

**EFFECTIVENESS:**

**EIA (Enzyme Immunoassay):** see ELISA.

**ELISA (Enzyme linked immunosorbent assay):** A laboratory test to determine the presence of specific antibodies in blood that indicates infection, such as with HIV. Also see: Western Blot

**ENCEPHALITIS:** A general term denoting inflammation of the brain.  
**ENCEPHALOPATHY:** Lesions in the brain, or general degeneration of brain matter

**ENDEMIC:** Pertaining to diseases associated with particular locales or population groups.

**ENDOCRINE:** Relating to the internal secretion of hormones into systemic circulation.

**ENDOGENOUS:** Relating to or produced by the body

**ENDOMYOCARDIAL BIOPSY:** Removal of tissue from the innermost layer of the heart muscle for laboratory examination.

**ENDOSCOPY:** Viewing the inside of a body cavity with a device using flexible fiber optics.

**ENDOTOXIN:** A toxin present inside a bacterial cell

**CYTOTOXIC T LYMPHOCYTE (CTL):** A lymphocyte that is able to kill foreign cells that have been marked for destruction by the cellular immune system, primarily CD8+ T cells.

**DELAYED-TYPE HYPERSENSITIVITY (D.T.H.):** A cell-mediated immune response that produces a cellular infiltrate and edema (swelling), redness and induration (hardness) between 48 and 72 hours after to an antigen. DTH response is the basis for PPD testing of tuberculosis exposure

**DEMENTIA:** Chronic intellectual impairment (loss of mental capacity) with organic origins that affects a person's ability to function in a social or occupational setting.

**DEMYEELINATION:** Destruction, removal, or loss of the myelin sheath of a nerve or nerves. See also MYELIN

**DENDRITIC CELL:** Bone-marrow derived immune cells found throughout the body. When exposed to antigen, these cells migrate to the lymphoid tissues and function as potent antigen-presenting cells.

**DESENSITIZATION:** The reduction or abolition of allergic sensitivity or reactions to the specific antigen (allergen) usually accomplished by evaluating clinical symptoms and laboratory tests.

**DIARRHEA:** Abnormally high frequency and liquidity of fecal discharges

**DIPLOPIA:** Double vision

**DISSEMINATED:** Spread throughout the body

**DNA (Deoxyribonucleic Acid):** A complex molecule that is the carrier of genetic information. HIV can insert itself into a cell's DNA and use cellular mechanisms for replication.

**DORMANCY:** See latency

**DOUBLE BLIND:** A clinical-trial design in which neither the participating patients or doctors know which patients are receiving the experimental drug and which are receiving placebo or another therapy. Double-blind trials help to produce objective results, since the doctor's and patient's expectations about the experimental drug are less likely to affect the outcome.

# GLOSSARY

**ENDPOINT:** A primary or secondary outcome variable used to judge the effectiveness of a treatment.

**ENTERAL:** Within or by way of the intestine or gastrointestinal tract.

**ENTERIC:** Pertaining to the intestines.

**ENTERITIS:** Inflammation of the intestine.

**ENVELOPE:** In virology, a protein covering that packages the virus' genetic information. The HIV envelope is composed of two units: gp120 and gp41. gp120 is the portion of HIV that binds to a helper T cell's surface protein, CD4.

**ENZYME:** A protein that makes chemical reactions proceed at a faster rate, without itself being consumed in the reaction.

**EOSINOPHIL:** A type of white blood cell called a granulo that can digest microorganisms, usually parasites

**EPIDEMIOLOGY:** A discipline concerned with the determination of the specific causes or distribution of a disease or the interrelation between various factors determining a disease.

**EPITOME:** A unique shape or marker carried on an antigen's surface that triggers a corresponding antibody response

**EPSTEIN-BARR VIRUS (EBV):** A herpes-like virus that causes one of the two kinds of mononucleosis (the other is caused by CMV). It infects the nose and throat and is contagious. EBV usually lies dormant in the lymph glands and has been associated with Burkitt's Lymphoma and hairy leukoplakia

**ERYTHEMATOUS:** Red or reddened.

**ERYTHROCYTES:** Red blood cells. The primary function of erythrocytes is to carry oxygen to cells.

**ETIOLOGY:** The study or theory of factors that cause disease

**EXOGENOUS:** Developed or originating outside the body.

**EXOTOXIN:** A toxic substance made by bacteria that is released outside the bacterial cell.

**EXPANDED ACCESS:** A general term for methods of distributing experimental drugs to patients who are unable to participate in ongoing clinical efficacy trials and have no other treatment options. Specific types of expanded-access mechanisms include parallel track, Treatment IND, and compassionate use.

**EXTRAPULMONARY:** Outside the lungs.

**FEASIBILITY STUDY:** A preliminary study designed to determine the practicality of a larger study. See "PLOT STUDY"

**FEBRIILE:** With a fever.

**FIRST-LINE THERAPY:** The preferred therapy for a particular condition.

**FLORA:** Plant life; the population of microorganisms inhabiting internal or external surfaces.

**FLUOROQUINOLONES:** A family of antibiotics, including ciprofloxacin, ofloxacin, and sparfloxacin.

**FOALATE:** A salt or ester of folic acid, a crystalline vitamin of the B complex.

**FOLLICULAR DENDRITIC CELL (FDC):** Cells found in the lymphoid tissue that present antigen to B cells, stimulating the B-cell memory (antibody) response of the immune system

**FOLLICULITIS:** An infection or inflammation of the follicle, at the root of a hair.

**FOMITE:** An object that harbor pathogenic microorganisms, and thus serve as an agent of transmission of an infection.

**FUNDOSCOPIC EXAM:** Visual inspection of the interior of the eye. Often used to diagnose CMV retinitis.

**FUNGICIDAL:** A substance that kills a fungus.

**FUNGUS:** A general term used to denote a class of microbes including mushrooms, yeasts and molds.

**G-CSF (GRANULOCYTE-COLONY STIMULATING FACTOR):** A cytokine that stimulates the growth of granulocytes, a type of white blood cell. It is marketed as a

medicine to alleviate the neutropenia that is a side effect of certain drugs.

**GALLIUM SCAN:** A diagnostic procedure where mildly radioactive gallium particles are injected, and inflammatory disease processes (often *Pneumocystis carinii* pneumonia) is diagnosed by scanning the body for radioactive signature. Also used to detect B cell lymphomas.

**GANGLION:** A mass of nervous tissue, composed principally of nerve-cell bodies, usually lying outside the central nervous system.

**GP-120:** See envelope.

**GP-41:** See envelope.

**GPI60:** The "precursor" protein to both gp41 and gp120 components of the envelope of HIV. It is cleaved by viral enzymes into the two surface proteins at a late stage of viral assembly.

**GRANULOCYTES:** A cell type of the immune system filled with granules of toxic chemicals that enable them to digest microorganisms. Basophils, neutrophils, and eosinophils, are examples of granulocytes.

**GROSCHUNG CATHETER:** An indwelling line inserted into the large veins of the chest, used for administering medication and total parenteral nutrition over long durations. Also see "HICKMAN CATHETER."

**GASTRIC:** Relating to the stomach

**GASTROINTESTINAL:** Relating to the stomach and intestines.

**GASTROSTOMY TUBE:** A tube inserted into the stomach via a surgically created artificial opening.

**GENE:** A unit of DNA that carries information for the bio-synthesis of a specific product.

**GENOME:** One set of chromosomes containing the complete genetic makeup of an organism.

**GIARDIASIS:** A common protozoal infection of the small intestine spread via contaminated food and water and direct person-to-person contact.

# GLOSSARY

**GM-CSF (GRANULOCYTE MACROPHAGE COLONY STIMULATING FACTOR):** A cytokine that stimulates the growth of granulocytes and macrophages. Like G-CSF, GM-CSF is marketed to alleviate neutropenia but has more side effects.

**GONORRHEA:** A sexually transmitted disease, inflammation of genital mucous membranes caused by the bacteria gonococcus.

**HEMOPHILIA:** An inherited disease that prevents the normal clotting of blood

**HEPATIC:** Pertaining to the liver

**HEPATITIS:** Inflammation of the liver.

**GROWTH FACTOR:** A substance that promotes the growth of specific cells.

**GROWTH HORMONE:** A pituitary hormone that regulates growth. Human growth hormone is being used experimentally in wasting syndromes associated with cancer, burns and HIV

**GUILLAIN-BARRE SYNDROME:** An acute febrile polyneuritis.

**HAIRY LEUKOPLAKIA:** A whitish, slightly raised lesion that appears on the side of the tongue. Thought to be related to Epstein-Barr virus infection, it was not observed before the HIV epidemic.

**HELPER T CELLS (CD4):** A subset of T cells that carry the CD4 receptor that are essential for activating antibody production, cytotoxic T cells, and other immune responses.

**HELPER-SUPPRESSOR RATIO:** The ratio of helper (CD4+) T-cells to suppressor (CD8+) T-cells

**HEMATOCRIT:** A laboratory measurement that determines the percentage of packed red blood cells in a given volume of blood.

**HEMATOPOIETIC:** Pertaining to the formation of blood cells.

**HEMATOTOXIC:** Poisonous to the blood or bone marrow.

**HEMOGLOBIN:** The component of red blood cells that carries oxygen.

**HEMOLYSIS:** The rupture of red blood cells.

**HEPATITIS C:** A viral disease that causes inflammation of the liver and may cause severe, life-threatening, liver damage, formerly known as "non-A, non-B hepatitis."

**HEPATITIS B:** A viral liver disease that can be acute or chronic and even life-threatening, particularly in people with weakened immune systems. Can be transmitted by sexual contact, contaminated needles or contaminated blood or blood products.

**HERPES VARICELLA ZOSTER VIRUS (HVZ, or VZN):**

The varicella virus causes chicken pox in children and may reappear in adulthood as herpes zoster. Herpes zoster, also called shingles, consists of very painful blisters on the skin that follow nerve pathways.

**HERPES SIMPLEX VIRUS 1 (HSV 1):** A virus causing painful sores of the anus or genitals that may lie dormant in nerve tissue and can be reactivated to produce the symptoms. HSV 11 may be transmitted to a neonate during birth from an infected mother.

**HERPES SIMPLEX VIRUS 2 (HSV 2):** A virus that causes cold sores or fever blisters on the mouth or around the eyes and can be transmitted to the genital region. The latent virus can be reactivated by stress, trauma, other infections or suppression of the immune system.

**HHV-6 (HUMAN HERPESVIRUS-TYPE 6):** A herpesvirus that preferentially infects CD4+ and CD8+ T Lymphocytes. It is widespread, and is being investigated as a possible co-factor for HIV disease progression

**HHV-8 (HUMAN HERPESVIRUS-TYPE 8):** A newly identified herpesvirus implicated in the development of Kaposi's sarcoma

**HICKMAN CATHETER:** An indwelling line inserted into the large veins of the chest, used for administering medication and total parenteral nutrition over long durations. Also see "GROSCHUNG CATHETER."

**HISTOCOMPATIBILITY TESTING:** A method of matching the self antigens (HLA) on the tissues of a transplant donor with those of a recipient. The closer the match, the better the chance that the transplant will not be rejected.

**HISTOPLASMOSIS:** A fungal disease resulting from infection with histoplasma capsulatum.

**HIV-2:** See Human Immunodeficiency Virus Type 2.

**HIV-1:** See Human Immunodeficiency Virus Type 1.

**HORMONE:** An active regulatory chemical substance formed in one part of the body and carried by the blood to another part of the body, where it signals the coordination of cellular functions.

**HOST:** A cell or organism that supports the growth of a parasite or virus.

**HTLV-1 (HUMAN T CELL LYMPHOTROPIC VIRUS TYPE 1):**

A retrovirus with an affinity for T-lymphocytes, which appears to be the causative agent of certain T cell leukemias and T cell lymphomas.

**HTLV-1 (HUMAN PAPILLOMAVIRUS (HPV):** A member of the papova family of viruses HPV, causes warts or nipple-like protrusions. HPV has also been associated with cervical cancer in women and anal cancer.

**HUMAN IMMUNODEFICIENCY VIRUS TYPE 1 (HIV-1):**

The retrovirus isolated and recognized as the etiologic agent of AIDS. HIV-1 is classified as a lentivirus in a subgroup of the retroviruses.

**HUMAN IMMUNODEFICIENCY VIRUS TYPE 2 (HIV-2):** A virus closely related to HIV-1 that has been found to cause immune suppression. Most common in Africa

**HUMAN LEUKOCYTE ANTIGENS (HLA):** Markers that identify cells as "self" and prevent the immune system from attacking them.

**HUMORAL IMMUNITY:** The branch of the immune system that relies primarily upon antibodies. See also "cellular immunity."

# GLOSSARY

**HYPERSensitivity:** Abnormal sensitivity; medically, when the body responds in an exaggerated manner to a foreign agent; allergy.

**HYPERURICEMIA:** Excess of uric acid or urates in the blood, it precedes the development of gout and may lead to renal disease.

**HYPOGAMMAGLOBULINEMIA:** Abnormally low levels of immunoglobulins.

**HYPONIA:** Reduction of oxygen supply to tissue.

**IDIOTYPES:** The unique and characteristic parts of an antibody's variable region, which can themselves serve as antigens.

**IMMUNE RESPONSE:** The activity of the immune system against foreign substances

**IMMUNE SYSTEM:** The complex functions of the body that recognize foreign agents or substances, neutralize them, and recall the response later when confronted with the same challenge.

**IMMUNE DEFICIENCY:** A breakdown or inability of certain parts of the immune system to function, making persons susceptible to certain diseases which they would not ordinarily develop.

**IMMUNE COMPLEX:** Clusters formed when antigens and antibodies bind together.

**IMMUNITY:** A natural or acquired resistance to a specific disease. Immunity may be partial or complete, long lasting or temporary.

**IMMUNOCOMPETENT:** Possessing a normal immune system.

**IMMUNOGLOBULIN:** See antibodies.

**IMMUNOMODULATOR:** Any substance that influences the immune system.

**IMMUNOSTIMULANT:** Any agent or substance that triggers or enhances the body's defenses; also called immunopotentiators.

**IMMUNOSUPPRESSION:** A state of the body in which the immune system is damaged and does not perform its normal functions. Immunosuppression may be induced by drugs or result from certain disease processes (such as HIV infection).

**IMMUNOTHERAPY:** Treatment aimed at improving impaired immune function.

**IMMUNOTOXIN:** A monoclonal antibody linked to a toxic drug or a radioactive substance.

**IN UTERO:** Latin for "in the uterus," or womb.

**IN VIVO ("in life"):** Studies conducted within a living organism, e.g., animal or human studies.

**IN VITRO ("in glass"):** An artificial environment created outside a living organism, e.g., a test tube or culture plate used in experimental research to study a disease or process.

**INCIDENCE:** The number of new cases of a disease that develop in a population during a specific period of time.

**INCUBATION PERIOD:** The time interval between the initial exposure to infection and appearance of the first symptom or sign of disease.

**INDUCED SPUTUM:** A test where saline mist is inhaled to induce a cough. Resultant sputum (mucus expectorated from the air passages) is cultured or stained to look for microorganisms.

**INDUCTION:** The initiation of a particular therapy

**INFECTION:** The state or condition in which the body (or part of it) is invaded by an infectious agent. When it multiplies and produces an injurious effect it is called an active infection.

**INFECTIOUS:** Capable of being transmitted by infection, with or without actual contact

**INFORMED CONSENT:** Protection required for people considering entering a clinical trial. Before entering the trial participants must sign an informed-consent statement that acknowledges that they understand important information about the trial, including possible risks, benefits, and alternatives.

**INSTITUTIONAL REVIEW BOARD (IRB):** A committee of physicians, statisticians, community advocates and others that ensures that a clinical trial is ethical and that the rights of the study participants are protected. All clinical trials in the United States must be approved by an IRB before they begin.

**INTENT TO TREAT ANALYSIS:** A statistical method for data analysis in which outcome data are compared among the originally randomized groups, regardless of whether or not patients continued to take their assigned therapy.

**INTERFERON:** One of a family of proteins, some of which are secreted by virus-infected cells. There are three classes: alpha-, beta-, and gamma-interferons, the former two inhibit virus replication in uninfected cells.

**INTERLEUKIN:** A chemical hormone messenger (cytokine) secreted by and affecting many different cells in the immune system.

**INTERLEUKIN 2 (IL-2):** A cytokine that is produced by T helper and suppressor lymphocytes following recognition of certain antigens. IL-2 activates growth of T lymphocytes and enhances natural killer cell function. IL-2 synthesis and release is characteristic of a cell-mediated, or TH-1 immune response.

**INTRAMURAL:** Research that is done at the National Institutes of Health, often in the the clinical research facility.

**INTRAMUSCULAR:** Into the muscle: frequently in reference to injections.

**INTRATECAL:** Injection of a substance through the theca of the spinal cord into the subarachnoid space.

**INTRAVENOUS:** Within a vein

**INVESTIGATIONAL NEW DRUG APPLICATION (IND):** An application submitted to the Food and Drug Administration for permission to test a new drug or an old drug for a new indication in humans.

**ISOMER:** A compound exhibiting or capable of exhibiting isomerism.

# GLOSSARY

**ISOMERISM:** The relationship that exists between two or more different chemical compounds that have the same molecular formula.

**ISOSPOROSIS:** A protozoal infection, usually restricted to the lower gastrointestinal tract.

**ITP (immune thrombocytopenic purpura):** A condition in which the body produces antibodies against the platelets, components of the blood that are responsible for blood clotting, resulting in low platelet counts and easy bleeding. ITP is common in HIV-infected people.

**JAVÍDICE:** Yellowish discoloration of the skin and eyes due to bilirubin. Usually associated with some form of liver damage or malfunction.

**JC VIRUS:** A virus that is believed to be the cause of the neurological disease progressive multifocal leukoencephalopathy (PML.)

**KAPLAN-METER CURVE:** A way of graphing outcomes (e.g., number still alive or free of infection) against time, in clinical trials life table curves show the percent of people in each treatment group free of a specific event at times following randomization.

**KAPOSI'S SARCOMA (KS):** A tumor of the wall of blood vessels, or the lymphatic system. Usually appears as pink to purple, painless spots on the skin but may also occur internally (such as in the lungs and intestines)

**KARNOFFSKY SCORE:** A subjective score between 0-100, assigned by a physician to describe a patient's ability to function and perform common tasks. Normal functioning is scored as 100.

**KILLER T CELL:** See cytotoxic T lymphocyte.

**KINASE:** An enzyme that mediates the conversion of a proenzyme to an active enzyme. Natural nucleosides and drug analogues (such as AZT, acyclovir, ddC, etc.) must be phosphorylated to become biologically active

**KUPFFER CELLS:** Specialized macrophages in the liver.

**LAK CELLS:** Lymphocytes transformed in the laboratory into lymphokine activated killer cells, which attack tumor cells

**LANGERHANS CELLS:** Dendritic cells in the skin that pick up antigen and transport it to the lymph nodes.

**LAS (Lymphadenopathy Syndrome):** A chronic enlargement of lymph nodes, often associated with HIV infection.

**LATENCY:** The period when an organism is in the body and not producing any ill effects.

**LAV:** (Lymphadenopathy Associated Virus): See HIV.

**LAVAGE:** Washing.

**LEGIONELLA PNEUMOPHILA:** An ubiquitous bacteria causing pneumonia, also known as "legionnaire's disease." Most exposure is from tap water, often aerosolized by a shower head or air conditioner.

**LENTIVIRUS:** A sub-family of retroviruses that is cytopathic and causes chronic diseases. HIV is a type of lentivirus.

**LESION:** A general term to describe an area of altered tissue, the infected patch or sore in a skin disease.

**LEUKOCYTES:** All white blood cells.

**LEUKOPENIA:** A lower than normal level of leukocytes in the blood

**LIPOSOMES:** A spherical particle in an aqueous (water) medium, formed by a lipid bilayer enclosing an aqueous compartment

**LUMBAR PUNCTURE:** A procedure in which cerebrospinal fluid from the lower back is withdrawn with a long needle for examination, also known as a spinal tap, often abbreviated as LP

**LYMPHI:** A transparent, slightly yellow fluid that carries lymphocytes. Lymph is derived from tissue fluids collected from all parts of the body and is returned to the blood via lymphatic vessels.

**LYMPHI NODES:** Small bean-sized organs of the immune system, distributed widely throughout the body. Lymph fluid is filtered through the lymph nodes in which all types of lymphocyte take up temporary residence. Antigens that enter the body find their way into lymph or blood and are filtered out by lymph nodes or the spleen respectively, for attack by the immune system.

**LYMPHADENOPATHY:** Swollen, firm and possibly tender lymph nodes. The cause may range from a infection such as HIV, the flu, mononucleosis, or lymphoma (cancer of the lymph nodes).

**LYMPHATIC VESSELS:** A body wide network of channels, similar to the blood vessels, that transports lymph to the immune organs and into the bloodstream.

**LYMPHOCTYES:** Cells produced chiefly by the lymphoid tissue that are the cellular mediators of immunity. See T cells and B cells.

**LYMPHOKINES:** Non antibody mediators of immune responses, released by activated lymphocytes.

**LYMPHOMA:** A cancer of the lymph tissue.

**LYMPHOMA:** A malignancy of cells of the lymphoid tissue

**LYSIS:** Rupture and destruction of a cell.

**MACROLIDES:** A group of antibiotic drugs, such as erythromycin and azithromycin.

**MACROPHAGE:** A scavenger cell specializing in the ingestion and processing of large particulate matter, especially harmful bacteria. The macrophage may be a reservoir for HIV group of genes that control aspects of the immune response. The products of these genes, the histocompatibility antigens, are present on every cell of the body and serve as markers to distinguish self from non-self cells

**MALABSORPTION SYNDROME:** Decreased intestinal absorption resulting in loss of appetite, muscle pain, weight loss, and diarrhea

**MALNUTRITION:** Poor nutrition resulting from inadequate diet, undereating, or abnormal absorption of nutrients from the gastrointestinal tract.

**MAST CELL:** A granulocyte found in tissue. The contents of the mast cells, along with those of basophils, are responsible for the symptoms of allergy.

**MEAN:** The average, or the sum of the quantities divided by the number of quantities summed.

**MEAN CORPI SCULAR VOLUME (MCV):** The average volume of erythrocytes, conventionally expressed in cubic micrometers per red blood cell.

# GLOSSARY

<b>MEDIAN:</b> The value such that for a group of numbers such that one-half are above the value, and one-half are below.	<b>NEOPLASM:</b> An abnormal and uncontrolled growth of tissue; a tumor.
<b>MEMBRANE:</b> A thin sheet or layer of tissue, surrounding an organ, or of lipids (fats) embedded in protein when surrounding a single cell, that serves as a semi-permeable covering.	<b>NEPHROTOXIC:</b> Poisonous to the kidneys.
<b>METABOLITE:</b> Any substance produced by metabolism or by a metabolic process	<b>NEUROPATHY:</b> Any abnormal, degenerative or inflammatory state of the peripheral nervous system.
<b>METHEMOGLOBINEMA:</b> The presence of methemoglobin, a compound formed from hemoglobin, which does not function as an oxygen carrier	<b>NEUROPATHY, PERIPHERAL:</b> A disorder of the nerves that involves the feet or hands and sometimes the legs, arms and face. Symptoms may include numbness, a tingling or burning sensation, sharp pain, weakness and abnormal reflexes. It is a common dose-related side effect of the antiretroviral drugs ddC and d4T.
<b>MICRO-ORGANISM:</b> See microbes.	<b>NEUTRALIZATION:</b> Binding of an antibody to a microorganism resulting in elimination of the infectivity of the microorganism.
<b>MICROBES:</b> Microscopic living organisms, including bacteria, protozoa, and fungi.	<b>NEUTROPENIA:</b> An abnormal reduction of circulating neutrophils.
<b>MICRONUTRIENT:</b> A trace element; an organic compound like a vitamin that is essential but only in small amounts for physical health, growth and metabolism.	<b>NEUTROPHIL:</b> (polymorphonuclear neutrophils, PMNs) A white blood cell that plays a central role in defense of a host against many infections (especially bacterial); they engulf and kill foreign microorganisms.
<b>MICROSPORIDIOSIS:</b> Disease resulting from infection with a protozoal pathogen.	<b>NK CELLS:</b> See natural killer cells.
<b>MITOGENS:</b> Natural substances that stimulate cell division	<b>NOSOCOMIAL:</b> Infection or illness acquired in a hospital or other health care facility.
<b>MOLECULE:</b> A single unit of a specific substance	<b>NSAID:</b> Non-steroidal anti-inflammatory drug
<b>MONOCLONAL ANTIBODIES:</b> Antibodies produced by a single cell or its identical progeny, specific to a given antigen. Monoclonal antibodies are useful as a tool for identifying specific protein molecules.	<b>NUCLEIC ACIDS:</b> Large, naturally occurring molecules composed of chemical building blocks known as nucleotides or nucleosides. There are two kinds of nucleic acids, DNA and RNA.
<b>MONOCYTE:</b> A large white blood cell that acts as a scavenger, capable of destroying invading bacteria or other foreign material. Precursor to the macrophage.	<b>NUCLEOSIDE ANALOGUE:</b> A synthetic compound similar to one of the components of DNA or RNA, a general type of anti-viral drug with structural similarities to the natural nucleosides (e.g., acyclovir and AZT).
<b>MORBIDITY:</b> The condition of being diseased or sick, also the incidence of disease or rate of sickness.	<b>OCULAR:</b> Pertaining to the eye.
<b>MORTALITY:</b> Death; also death rate.	<b>OOCYST:</b> A stage in the life of a sporozoan marked by encapsulation
<b>MRI:</b> Magnetic resonance imaging; a non-invasive diagnostic technique that can provide information on the form and function of internal tissue and organs of the body.	

# GLOSSARY

**OPEN-LABEL:** A clinical trial in which the study physician and/or participant are not blinded to study treatment(s). In other words, both the doctor and patient know what study treatment the patient is taking.

**OPPORTUNISTIC INFECTIONS:** An infection in an immune compromised person caused by an organism that does not usually cause disease in healthy people

**OROPHARYNGEAL:** Relating to that division of the pharynx between the soft palate and the epiglottis.

**OUTCOME:** An event of interest, generally indicating disease progression. Patients in a trial are observed for the occurrence of the outcome at one or more time points after enrollment for the purpose of assessing the effects of the study treatments

**P.C.R (POLYMERASE CHAIN REACTION):** A highly sensitive test that can detect DNA or RNA fragments of viruses or other organisms in blood or tissue; distinguishes specific sequences of DNA

**PALLIATIVE:** A treatment that provides symptomatic relief, but not a cure.

**PANCREATITIS:** Inflammation of the pancreas that can produce severe pain and debilitating illness.

**PANCYTOPENIA:** Deficiency of all cell elements of the blood.

**PANDEMIC:** Referring to an epidemic disease of widespread prevalence.

**PAP SMEAR:** See Papanicolaou smear

**PAPANICOLAOU SMEAR:** A staining procedure used to detect various abnormal conditions of the female genital tract (cervix).

**PARALLEL TRACK:** A system of distributing experimental drugs to patients who are unable to participate in ongoing clinical efficacy trials and have no other treatment options.

**PARASITE:** A plant or animal that lives and feeds on or within another living organism. Does not necessarily cause disease.

**PARENCHYMA:** Essential structural elements of an organ

**PARENTERAL:** Not through the mouth. Intravenous, intramuscular, and intradermal routes of administration of drugs are all parenteral.

**PARESTHESIA:** Abnormal physical sensations

**PATHOGEN:** Any disease-producing microorganism or material.

**PATHOGENESIS:** Description of the development of a particular disease, especially the events, reactions and mechanisms involved at the cellular level

**PCP:** See *Pneumocystis carinii pneumonia*

**PEDIATRIC:** Relating to the medical specialty concerned with the development, care and treatment of children from birth through adolescence

**PEPTIDE:** Two or more chemically linked amino acids.

**PERINATAL:** Around or close to the anus.

**PERINATAL:** Events that occur at or around the time of birth.

**PERSISTENT GENERALIZED LYMPHADENOPATHY (PGL):** Chronic, diffuse, non-cancerous lymph node enlargement

**PGL:** See persistent generalized lymphadenopathy

**pH:** The acidity or alkalinity of a solution, measured by the hydrogen ion concentration of a solution. Neutral, or normal, body pH is 7.4.

**PHAGOCYTE:** A cell that is able to ingest and destroy foreign matter, including bacteria

**PHAGOCYTOSIS:** The process of ingesting and destroying a virus or other foreign matter by phagocyte (monocyte/macrophage, PMN)

**PHARMACOKINETIC:** Concerning the study of how a drug is processed by the body, with emphasis on the time required for absorption, distribution in the body and method of excretion.

**PHASE I TRIAL:** The first stage in testing a new drug in humans. These studies usually generate preliminary information on the chemical action and safety of the drug

**PHASE II TRIAL:** The second stage in testing a new drug in humans. Usually randomized, the main purpose is to provide preliminary information on treatment efficacy and to supplement information on safety obtained from Phase I trials.

**PHASE III/IV TRIALS:** Similar to Phase II studies, but called III/IV when the drug being studied is a new drug for a life-threatening disease. Expedited review is expected to follow completion of this stage.

**PHASE III TRIALS:** The third and usually final stage prior to approval by the FDA in testing a new drug in humans. These trials are concerned primarily with assessment of dosage effects, and efficacy and safety in large numbers of people. Often includes a control treatment and random allocation to treatment

**PHASE IV TRIALS:** Studies designed to evaluate the long-term safety and efficacy of a drug, usually carried out after licensure of the drug for that indication. Also known as "Post-Marketing" studies.

**PILOT STUDY:** A preliminary study designed to indicate whether a larger study is practical. See "FEASIBILITY STUDY"

**PLACEBO:** An inactive substance against which investigational treatments are compared for efficacy.

**PLACEBO EFFECT:** A change that occurs after a placebo is taken, due to the expectations of the patient

**PLACENTA:** A combination of fetal and maternal cells that serves as the organ of exchange for nutrients and other chemicals between mother and fetus during pregnancy.

**PLASMA:** The fluid of blood in which the red and white blood cells are suspended

**PLASMA CELLS:** Large antibody-producing cells that develop from B cells

**PLASMAPHERESIS:** The removal of blood, separation of plasma, and reinfusion of blood

**PLATELETS:** Circulating cellular fragments critical for blood clotting and sealing off wounds

**PML:** See Progressive Multifocal Leukoencephalopathy

# GLOSSARY

**PNEUMOCYSTIS CARINII PHEUMONIA (PCP):** A protozoal infection of the lungs; the most common life-threatening opportunistic infection in AIDS patients.

**POLYMORPHONUCLEAR LEUKOCYTES:** See granulocyte.

**POLYNEURITIS:** Inflammation of many nerves at once.

**POST-PARTUM:** After giving birth.

**POWER:** The probability of finding a treatment effect that actually exists. In clinical trials, the power of the study is the ability of the study to detect an hypothesized difference between treatment groups if in fact it exists.

**PRECLINICAL:** Refers to research that has been done before a compound is tested in humans, i.e., laboratory and animal studies.

**PREGNATAL:** Relating to the period before birth.

**PRESUMPTIVE:** Presumed but not proven. In the diagnosis of a disease or infection, a presumptive diagnosis is one where signs and symptoms are characteristic, but tissue confirmation is not obtained.

**PREVALENCE:** The proportion of people in a specific population who have a certain disease or condition at a point in time.

**PRINCIPAL INVESTIGATOR:** The lead scientist in a research project.

**PROCTITIS:** Inflammation of the rectum.

**PRODROME:** A symptom that indicates the onset of a disease.

**PROGENITOR:** Parent or ancestor.

**PROGRESSIVE MULTIFOCAL LEUKOENCEPHALOPATHY (PML):** An opportunistic infection resulting from reactivation or new infection with the JC virus.

**PROPHYLAXIS:** Treatment intended to preserve health and prevent the occurrence of a disease.

**PROTEINS:** Organic compounds made up of amino acids. Proteins are one of the major constituents of plant and animal cells.

**PROTEINURIA:** The presence of excess serum proteins in the urine.

**PROTOCOL:** A detailed plan for performing an experiment, such as studying a treatment for a specific condition in people.

**PROTOZOA:** A group of one-celled animals, a few of which cause human disease.

**PROVIRUS:** Viral genetic material, in the form of DNA, that has been integrated into the human host genome.

**PURITUS:** Itching.

**PULMONARY:** Pertaining to the lungs

**RADIOLOGY:** The science of diagnosis and/or treatment using radiant energy. Includes X-rays, Magnetic Resonance Imaging (MRI), destruction of tumors by radiation, etc.

**RANDOMIZATION:** The process of assigning patients to treatment by chance, i.e. using a random process.

**RECOMBINANT:** Produced in a laboratory from a construct that was produced by genetic engineering laboratory.

**RECURRENCE:** The return or flare-up of a condition thought cured or in remission.

**REFRACTORY:** Resistant to treatment, as of a disease.

**REGIMENT:** Any particular treatment plan specifying which drugs are used, in what dose, according to what schedule, and for how long.

**REGRESSION ANALYSIS:** A method of explaining or predicting the variability of a dependent variable using information about one or more independent variables.

**REMISSION:** The lessening of the severity or duration of outbreaks, or the abatement of symptoms altogether over a period of time.

**RENAL:** Pertaining to the kidneys.

**RESISTANCE:** The ability of some pathogens to grow and multiply even in the presence of certain drugs which normally kill them.

**RETICULOENDOTHELIAL CELLS:** Pertaining to tissues having both reticular and endothelial characteristics.

**RETINITIS:** Inflammation of the retina, linked in AIDS to CMV infection. Untreated, it can lead to blindness.

**RETROVIRUS:** Any group of RNA-containing viruses that produce reverse transcriptase, which they use for making DNA, using RNA as a template. HIV is a retrovirus.

**REVERSE TRANSCRIPTASE:** A retroviral enzyme that is capable of copying RNA into DNA, an essential step in the life-cycle of HIV. AZT, ddI and ddC work by inhibiting reverse transcriptase.

**RIBONUCLEIC ACID (RNA):** A complex nucleic acid responsible for translating genetic information from DNA and transferring it to the cell's protein-making machinery.

**SALMONELLA:** An ubiquitous family of gram-negative bacteria that can cause serious disseminated disease in HIV positive persons. A common cause of food poisoning in undercooked poultry and eggs.

**SAMPLE SIZE:** The number of participants required to conduct a clinical trial.

**SCOTONLL:** An area of lost or depressed vision.

**SEBORRHEIC DERMATITIS:** A chronic inflammatory disease of the skin of unknown etiology, characterized by moderate erythema, dry, moist or greasy scaling, and yellow crusted patches on various areas, including the mid-parts of the face, ears, supraorbital regions, umbilicus, genitalia, and especially the scalp.

**SEPSIS:** The potentially fatal presence of harmful microorganisms or associated toxins in the blood, characterized by high fever.

**SEPTICEMIA:** Disease due to sepsis, the presence of harmful microorganisms or associated toxins in the blood

**SEROCONVERSION:** The development of antibodies detected by blood testing.

**SEROLOGIC TEST:** Any of a number of tests that are performed on the clear, liquid portion of blood (serum). Often refers to a test that determines the presence of antibodies to antigens such as viruses.

# GLOSSARY

**SEROSTATUS:** The presence or absence of antibodies to a specific pathogen (such as HIV) in the serum portion of blood.

**SERUM:** The clear, non-cellular portion of the blood containing antibodies.

**SHINGLES:** See herpes zoster.

**SIDE EFFECTS:** The action or effect of a drug other than that desired. The term usually refers to undesired or negative effects, such as headache, skin irritation, or liver damage. Experimental drugs must be evaluated for both immediate and long-term side effects.

**SIGNIFICANCE, STATISTICAL:** Infers that an observation was unlikely to have occurred by chance alone.

**SINUSITIS:** An infection of the sinus cavities in the head, often bacterial.

**SIV (SIMIAN IMMUNODEFICIENCY VIRUS):** A family of naturally-occurring lentivirus in certain species of African monkeys that apparently cause no disease in their natural hosts. In macaque monkeys, these viruses can cause a persistent infection that shows many parallels to human AIDS

**SPLEEN:** A lymphoid organ in the abdominal cavity that helps clear the blood of undesirable elements. People can live without a spleen.

**SPLENOMEGLAIN:** An enlarged spleen

**STANDARD ERROR:** A statistic indicating how greatly the mean score of a single sample is likely to differ from the mean score of the population

**STANDARD DEVIATION:** A statistic that shows the spread or dispersion of scores in a distribution of scores.

**STAPH:** Short for staphylococcus, a common bacteria that can cause serious infections

**STD:** Sexually transmitted disease

**STEM CELLS:** Cells from which all blood cells derive. Bone marrow is rich in stem cells.

**STEVENS-JOHNSON SYNDROME:** A severe and sometimes fatal form of erythema multiforme that is characterized by conjunctivitis, Vincent's angina (trench mouth), and ulceration of the genitals and anus. It is one of the most severe and life-threatening reactions to sulfa-containing drugs. It can often result in blindness.

**STOMATITIS:** Inflammatory condition of the mouth having various causes (as mechanical trauma, irritants, allergy, vitamin deficiency, or infection)

**STRATIFICATION:** The process of classifying observation units in groups (strata), or the process of classifying patients into strata as part of the randomization process or for purposes of data analysis.

**SUBCLINICAL INFECTION:** An infection, or phase of infection, without readily apparent symptoms or signs of disease.

**SUBCUTANEOUS:** Beneath or introduced beneath the skin (e.g., subcutaneous injections).

**SUBTYPE:** A genetic and/or immunologic variant

**SULFONAMIDES:** A group of sulfa-based antibiotic drugs

**SUPPRESSOR T CELLS:** (T8, CD8) Subset of T cells that halt antibody production and other immune responses.

**SURROGATE MARKER:** A test, measurement, or score that is used in place of a clinical event in the design of a trial or in summarizing results from it (e.g., CD4 count for HIV disease progression). Used because the variable is believed to be related to the clinical event of interest and because of its perceived utility in yielding detectable treatment differences

**SUSCEPTIBLE:** Vulnerable or predisposed to a disease.

**SYMPTOMS:** Any perceptible, subjective change in the body or its functions that indicates disease or phases of disease, as reported by the patient.

**SYNCYTIAH ("giant cell"):** A dysfunctional multicellular clump formed by cell-to-cell fusion. Some strains of HIV readily induce syncytia, which may play an important role in the pathogenesis of AIDS.

**SYNDROME:** A group of symptoms and diseases that together are characteristic of a specific condition

**SYNERGISM/SYNERGISTIC:** An interaction between two or more agents (drugs) that produces or enhances an effect that is greater than the sum of the effects of the individual agents

**TINNITUS:** A ringing or buzzing noise in the ears

**TITER ("titre"):** A laboratory measurement of the amount (or concentration) of a given component in solution.

**SYPHILIS:** A sexually transmitted disease resulting from infection with the spirochete Treponema pallidum. It can be cured with penicillin in most patients.

**SYSTEMIC:** Throughout the body. Sometimes applies to medications that are taken orally or parenterally that saturate the entire body.

**T CELLS (T lymphocytes):** A thymus-derived white blood cell that participates in a variety of cell-mediated immune reactions. **Three fundamentally different types of T cells are recognized:** helper, killer, and suppressor (each has many subdivisions).

**T SUPPRESSOR CELLS:** T lymphocytes responsible for turning the immune response off after infection is cleared, a subset of CD8+ lymphocytes

**T-LYMPHOCTYE:** See T-Cells.

**T KILLER CELLS:** A major component of cytotoxic lymphocyte response (CTL), responsible for lysing infected or cancerous cell, a subset of CD8+ lymphocytes.

**T4:** See CD4

**TABLES DORSALIS:** A syphilitic disorder involving the spinal cord and sensory nerve trunks marked by wasting, pain, lack of coordination, and disorders of sensation, nutrition and vision.

**TERATOGENICITY:** The production of physical defects in an embryo or fetus in utero

**TH1/TH2 CELLS:** Subsets of T-helper lymphocytes, involved in cell-mediated immune response.

**THROMBOCYTOPENIA:** A decreased number of blood platelets, cell fragments important for blood clotting

**THRUSH:** Oral candidiasis

**THYMUS:** A lymphoid organ in the upper chest cavity where T-cells mature.

# GLOSSARY

**TOPICAL:** Applied to the skin or other external area

**TOTAL PARENTAL NUTRITION (T.P.N.):** A type of nutritional feeding that delivers all nutrients in liquid form through a plastic tube into a vein.

**TOXICITY:** The extent, quality, or degree of being poisonous or harmful to the body.

**TOXIN:** See endotoxin/exotoxin

**TOXOPLASMOSIS:** An opportunistic infection caused by the protozoan Toxoplasma gondii. It frequently causes focal encephalitis (inflammation of the brain). Toxoplasmosis may also involve the heart, lung, adrenal, pancreas, and testis.

**TRANSAMINASE:** A liver enzyme. A laboratory test that measures transaminase levels is used to help assess the health of the liver.

**TRANSFER FACTOR:** A fraction of white blood cells that apparently "transfers" capability to mount an immune response to a specific antigen.

**TRANSIENT:** Short-lived; passing, not permanent

**TREATMENT IND:** A protocol that provides experimental treatments to a class of patients lacking satisfactory alternative treatment.

**TUBERCULOSIS:** The disease caused by Mycobacterium Tuberculosis. Condition in which tuberculous infection has progressed so that the individual typically has signs and symptoms of illness, usually in the lungs.

**UBIQUITOUS:** Present everywhere; common and prevalent.  
**UVEITIS:** an inflammation of the middle coat of the eye, including the iris, ciliary body and the choroid.

**VACCINE:** A substance that contains antigenic components from an infectious organism. By stimulating an immune response (but not disease), it protects against subsequent infection by that organism.

**VARIABILITY:** The degree to which a set of quantities vary. The larger the variability, the further individual cases are from the mean. The smaller the variability, the closer the individual scores are to the mean.

**VARIABLE REGION:** The part of an antibody's structure that differs from one antibody to another.

**VARIABLE:** Any trait, characteristic, test, measurement, or assessment that is recorded for participants in a clinical trial

**VARIANCE** See "VARIABILITY"

**VARICELLA:** See Herpes Varicella Zoster virus.

**VARICELLA-ZOSTER VIRUS (V.Z.V.):** A virus in the herpes family that causes chicken pox during childhood and may reactivate later in life to cause herpes zoster (shingles) in immunosuppressed individuals..

**VERTICAL TRANSMISSION:** Transmission of HIV from mother to fetus.

**VIRAL CULTURE:** A laboratory method for growing viruses.

**VIRAL LOAD/BURDEN:** The concentration of a virus in the blood.

**VIREMIA:** The of virus in the blood stream.

**VIRION:** A virus particle existing freely outside a host cell.

**VIROLOGY:** The study of viruses and viral disease.

**VIRUCIDAL (virucide):** See antiviral.

**VIRULENCE:** The ability of a microorganism to produce serious disease.

**VIRUS:** A group of infectious agents characterized by their inability to reproduce outside of a living host cell. Viruses may subvert the host cells' normal functions, causing the cell to behave in a manner determined by the virus.

**VISCERAL:** Pertaining to the major internal organs.

**WASTING SYNDROME:** Progressive, involuntary weight loss associated with advanced HIV infection.

**WESTERN BLOD:** A laboratory test for the presence of specific antibodies that more accurate, but also more expensive and difficult, than the ELISA test.

**WILD-TYPE VIRUS:** The prevalent type of a virus in the host population before genetic manipulation or mutation; virus that is isolated from a host, as opposed to one grown in a lab culture.

# KEY TO ABBREVIATIONS AND SYMBOLS

<b>α</b>	Alpha	<i>Pneumocystis carinii</i> Pneumonia
<b>Ab</b>	Antibody	Polymerase Chain Reaction
<b>ACTG</b>	AIDS Clinical Trials Group	Progressive Multifocal Leukoencephalopathy
<b>Ag</b>	Antigen	Peripheral nervous system
<b>ANC</b>	Absolute Neutrophil Count	by mouth
<b>AP</b>	Aerosol Pentamidine	Every
<b>β</b>	Beta	Every Day
<b>bid</b>	Twice a day	Every Other Day
<b>biw</b>	Twice a week	Every Month
<b>BMT</b>	Bone Marrow Transplant	Every Week
<b>CBC</b>	Complete Blood Count	Every 14 days
<b>CBCT</b>	Community-Based Clinical Trial	Every 4 hours
<b>CDC</b>	Center for Disease Control and Prevention	Four times daily
<b>CD4</b>	<i>See glossary</i>	Every Other week
<b>CD8</b>	<i>See glossary</i>	Four times weekly
<b>CMV</b>	Cytomegalovirus	Recombinant
<b>CNS</b>	Central Nervous System	Red Blood Cell
<b>CPCRA</b>	Terry Beirn Community Program for Clinical Research on AIDS	Reverse Transcriptase
<b>CPK</b>	Creatine Phosphokinase	Subcutaneous
<b>CSF</b>	Cerebrospinal Fluid	SGOT
<b>DNA</b>	Deoxyribonucleic Acid	SGPT
<b>EBV</b>	Epstein-Barr Virus	TB
<b>ELISA</b>	Enzyme Linked Immunosorbant Assay	Tuberculosis
<b>γ</b>	Gamma	Three times daily
<b>g or gm</b>	Gram	Three times a week
<b>gp</b>	Glycoprotein	Unit
<b>G-6-PD</b>	Glucose-6-Phosphate Dehydrogenase	Unit
<b>GI</b>	Gastrointestinal	Week
<b>Hct</b>	Hematocrit	Within Normal Limits
<b>Hg</b>	Mercury	
<b>Hgb</b>	Hemoglobin	
<b>h</b>	hour	
<b>HSV</b>	Herpes Simplex Virus	
<b>HZV</b>	Herpes Zoster Virus	
<b>IC<sub>50</sub></b>	50% Inhibitory concentration	
<b>ID<sub>50</sub></b>	50% Inhibitory dose	PCP
<b>ID</b>	Intradermal	PCR
<b>IFN</b>	Interferon	PML
<b>IgG</b>	Immunoglobulin gamma	PNS
<b>IL</b>	Interleukin	PO
<b>IL</b>	Intralesional	q
<b>IN</b>	Intranasal	qd
<b>IM</b>	Intramuscular	qod
<b>IND</b>	Investigational New Drug	qm
<b>ITP</b>	Immune Thrombocytopenia Purpura	qw
<b>IU</b>	International Unit	q4d
<b>IV</b>	Intravenous	q4h
<b>IDU</b>	Injection Drug Use	qid
<b>IVIG</b>	Intravenous Immune Gammaglobulin	qow
<b>kg</b>	Kilogram	qiw
<b>KS</b>	Kaposi's sarcoma	r
<b>LFT</b>	Liver Function Tests	RBC
<b>m</b>	Month	RNA
<b>m<sup>2</sup></b>	meter squared	Ribonucleic Acid
<b>MAC</b>	<i>Mycobacterium avium</i> complex	RT
<b>μg</b>	Microgram	SC
<b>μM</b>	Micromolar	SGOT
<b>MCV</b>	Mean Corpuscular Volume	SGPT
<b>mg</b>	Milligram	TB
<b>ml</b>	Milliliter	Tuberculosis
<b>mm</b>	Millimeter	tid
<b>mm<sup>3</sup></b>	Cubic Millimeter	tw
<b>MTD</b>	Maximum Tolerated Dose	U
<b>MU</b>	Million Units	WBC
<b>ng</b>	Nanogram	wk
<b>NHL</b>	Non-Hodgkin's Lymphoma	WNL
<b>nM</b>	Nano molar	
<b>NSAID</b>	Non-steroidal anti-inflammatory drug	
<b>OI</b>	Opportunistic Infection	
<b>PBMC</b>	Peripheral Blood Mononuclear Cells	
<b>pg</b>	Picogram	

## **FREQUENTLY CALLED NUMBERS**

500 copies of this public document were published at an estimated cost of \$3.00 per copy, for a total cost of \$1,500.00, which includes \$1,500.00 for printing and \$.00 for distribution.
